ABSTRACT

The purpose of the project entitled as "ONLINE ARABIC LEARNING". Arabic language is one of the most commonly used language in the world. It plays a very important role in educational operations around the world. The Arabic speakers believe their language is the most precious language because God himself speaks Arabic in the Quran, which is the latest of Holy Books, and they are very proud of the Arabic language.

It contains various parts such as poetry, poem, novel, and stories, as well as linguistic and grammatical rules and movements of letters, which change the word according to the movements accompanying each letter, for example, there are movements of lifting and breaking and annexation and silence .

Arabic language contains many metaphors, and eloquent linguistic styles, which increased the importance of Arabic language

The aspects of Arabic language, especially how to employ the technology in learning and teaching Arabic languages.

Arabic language is very important for all Muslims around the world. It is the language of the Holy Quran where the Holy Quran revealed in terms of meanings, structures, sentences.

The impact of online Arabic Learning and the viewpoint of brain based learning on these implications. It can be done anywhere, as long as there is an internet network.

Arabic learning process carried out online has good benefits with varied but not optimal patterns of interaction through blended learning .

8.CONCLUSION:

Smart phone are becoming the center of our lives. These devices are bringing immediacy and an availability of the Internet that has changed and transformed the way people access information. Therefore there is utmost need to utilize this fast growing technology in propagating the teachings of learning. This is an attempt to make learning and understanding arabic language easy for Non-Arabic Speakers. Learn its vocabulary by learning root words along with their meanings and translation in English. (a feature especially designed for Non- Arabic Speakers).

We will do further implementations too in this project.

ABSTRACT

An online shopping system for an established store is what this project is. Delivering the online shopping page into the browser is the project's goal. Our concept seeks to provide online shopping advantages to customers of physical stores. It enables customers to make valued purchases from any shop using a website and the internet after speaking with customer advocates. As a result, the user will benefit from services offered by their chosen retailer, including home delivery, direct messaging, and online shopping. This strategy is applicable to local businesses as well as foreign brands with retail outlet chains. If stores provide an online portal where customers can easily make purchases from anywhere, they won't lose any more customers to well-known online retailers like Flipkart or eBay.

8. CONCLUSION

It can be concluded that opportunity for growth and promotion outside, compensation, working conditions, relationship with users, location of the organisation, opportunity to get user opinion. The system is strong enough to withstand regressive daily operations under conditions where the database is maintained and cleared over a certain time of span. The implementation of the system in the organization will considerably reduce data entry, time and also provide readily calculated reports.

ABSTRACT

The purpose of the project entitled as “ONLINE JOB PORTAL” is to computerize the Front Office online job portal to develop software which is user friendly simple, fast, and cost – effective. People are unable to get access to job opportunities due to inefficient distribution of information on job offers but now the Internet has made a huge impact on knowledge management and information dissemination all over the world. The Internet has changed the way of looking for job vacancies and searching for right and qualified candidates, through the development of job portals. Job portal system has made job searching processes easier. This project deals with the design and development of a Job Portal System. The purpose of this project is to develop a web-based system for users that will eliminate or reduce the manual work in job searching process and also reduce cost and time spent when advertising job vacancies. It allows job seekers to register online, search and apply for employment and also allows recruiters to register online, post job vacancies and look for suitable candidates

CONCLUSION:

People are unable to get access to job opportunities due to inefficient distribution of information on job offers but now the Internet has made a huge impact on knowledge management and information dissemination all over the world. The Internet is considered as one of the most popular method of accessing information all over the globe. Any person who has access to the Internet can access information anywhere in the world.

Due to the widespread use of the Internet in Ghana and how it has made tasks easier to do, the system, JAD JOB PORTAL SYSTEM, is meant to make job searching or job hunting easier and faster. The system aims and objective is to provide a platform where recruiters and jobseekers can communicate and also users can have access to the system 24/7.

ABSTRACT

Ideally integrative health service provider systems get various information from the potential patients based on the input they provide when they get in contact with the system. However it is not fully integrated. Recent development on clustering techniques meant automatically to group vast levels of information based on different conditions. Clustering techniques are slowly becoming an appropriate tool to solve problems which are in need of approaches towards classifying information. This project focuses on applying clustering techniques on the already integrated health care service provider system, so that a better way of helping the potential patients by matching their needs and giving higher-quality, more efficient care than the currently integrated system.

6. CONCLUSION AND FUTURE ENHANCEMENT

Clustering techniques are slowly becoming an appropriate tool to solve problems which are in need of approaches towards classifying information. This project focuses on applying clustering techniques on the already integrated health care service provider system, so that a better way of helping the potential patients by matching their needs and giving higher-quality, more efficient care than the currently integrated system. This system reduces the complexity and maintains the information.

ABSTRACT

The project entitled as "ONLINE NOTICE BOARD" is to computerize the Front Office online notice board to develop software which is user friendly, simple, fast, and cost – effective. Nowadays there are many colleges, company and usually whenever there is a big gathering of people living together like in a college an information spreading rapidly is very important. Using of wall Notice Board in every place is a tedious work since it needs to be updated vigorously and with correct and right information manually. An Online Announcement Displaying System (OADS) is presented here to reduce the delaying time of the information to spread across the College as well as managing the right information only to being displayed on the notice board. Research instruments such as observation and judgmental techniques were used to come with the definite result that the OADS will help the collegian to get the updates and know what is going on within the environment wherever they are at righty time. This system intends to simplify and improve the college performance, since most of the organizations use computerized system to perform their daily activities.

8. CONCLUSION:

After doing the thorough study we concluded Android based College Notification system will provide college related notices directly on your android device in this way Staff meeting related notices and students can get notices online. In this project in next modules we can implement following idea: To eliminate or reduce the human interaction so as to avoid mistakes in the database. It is now implemented to get notices for students as well as teachers. Student can get notice on its own android device and teacher can get their meetings and extra additional notices from HOD to Principal on its android device

ABSTRACT

In the earlier system, custom-made dresses were not available anywhere, not even in the women's dress department at the mall. A customised dress can only be acquired from a specialty store or by visiting any tailor, which is a very time-consuming process.

Online dress customization is the process of allowing customers to personalize various aspects of a dress through an online platform. It allows customers to create a dress that matches their unique style and preferences.

Online dress customization typically involves a user interface where customers can choose from a variety of design options such as the dress length, fabric type, color, neckline, sleeves, and embellishments. The interface may also allow customers to input their body measurements to ensure a perfect fit.

Once the customer has completed their design, they can review and finalize their order. The dress is then made to order and shipped to the customer.

Overall, online dress customization provides a convenient and fun way for customers to create a dress that is tailored to their preferences, without the need for in-person appointments with a dressmaker or designer.

8.CONCLUSION

A customer recognizes the value of a product that was developed specifically to meet their needs and desires. This indicates that providing customization could enhance the user experience and boost participation, earnings, and profits. Some people might view personalization as a costly investment and a challenging procedure. As a result of this project, we have developed an interactive platform where users must first register on the website before placing orders. Currently, we have kept the dresses' customization static, but in the future, we are going to make it dynamic as well as develop a virtual fitting room. While administrators can monitor and manage orders, categories, and customer data.

ABSTRACT

The purpose of the project entitled as “EMPLOYEE MANAGEMENT SYSTEM” is to computerize the Front Office Employee management to develop software which is user friendly simple, fast, and cost – effective. Employees are the backbone of any company therefore their management plays a major role in deciding the success of an organization. Employees Management Software makes it easy for the employer to keep track of all records. This software allows the administrator to edit employees, add new employees, transfer/promote/terminate employees. Each employee in the database is associated with a position can be added and edited when need arises. Employees can be transferred between positions easily without having to retype back their information in the database. You can check to see if there are duplicate positions/employees in the database. Most of all, the employer can assign tasks to employees and assess their progress in order to keep track of employee performance. A flexible and easy to use Employee Management software solution for small and medium sized companies provides modules for personnel information management thereby organization and companies are able to manage the crucial organization asset people. The combination of these modules into one application assures the perfect platform for re-engineering and aligning Human Resource processes along with the organizational goals. This system brings about an easy way of maintaining the details of employees working in any organization

8.CONCLUSION:

It can be concluded that opportunity for growth and promotion outside, compensation, working conditions, work timings/shifts, relationship with managers, location of the organisation, opportunity to use skills and work load are the major reasons for employee turnover. The system is strong enough to withstand regressive daily operations under conditions where the database is maintained and cleared over a certain time of span. The implementation of the system in the organization will considerably reduce data entry, time and also provide readily calculated reports.
